JX RUNTIME + ONYX ENGINE

ONYX RUNS THE MODEL. JX GUARDS THE DOOR.

Onyx Engine serves one model per process. JX Runtime installs it, spawns it, health-checks it and puts scoped keys, TLS, pairing and an audit log in front of it.

JX Runtime

Access keys & pairing

TLS & network posture

Model installs & fit checks

Onyx Engine

Inference on llama.cpp

Continuous batching

Streaming over SSE
